## Dos Cd Rom Driver Download

In order to facilitate that installation, I am attempting to install a CD-ROM drive.. Thus, the computer is rendered useless The problem appears to be caused by the line in CONFIG.. SYS When I boot MS-DOS from a floppy disk rather than the HD and remove that line from the file, the computer works just fine when I reboot from the HD.. Home » Downloads » Useful Dos Files Useful Dos Files Here is the collection of USB Drivers, SCSI Drivers, CD-ROM Drivers, SATA Driver, Ram Disk Drivers, and other useful dos Files.. Try making the first line of AUTOEXEC BAT this:And the second line this:If the problem is the CONFIG.

bat to see just what the config sys file did It is a very simple way to determining if the cdrom.. Active1 year, 6 months agoMicrosoft Cd Rom Driver DownloadDell Cd Rom Drivers DownloadMs-dos Cd-rom DriverI have an old MS-DOS computer that I am experimenting with.. However, a problem has occurred After installing the driver and restarting the system, one of two things happen: 1.. The drive is a Top Glory Electronics BCD G621D I have found the correct driver (<http://www..>) The computer has an AMD 80386 processor, 1664 KB of RAM, a 50 MB hard drive, and two floppy disk drives: one 3 1/2 inch, the other 5 1/4 inch.. I have added the following lines to the CONFIG SYS and AUTOEXEC BAT files, respectively:andThe former loads the driver into memory, and the latter configures the MSCDEX.. EXE program to interact with the driver, thus allowing the user (me) to access the CD-ROM drive.. You could temporarily remove the sound card Or you could connect the cd drive to the sound cards IDE port.

sys processing This may really help you confirm that the config sys line is what is causing stability issues.. See:TOOGAM's Software Archive: CD drivers for DOS for details Because conventional memory was often important in DOS, I would be fairly try those drivers in just about any case, even if official manufacturer's drivers weren't causing stability issues.. I am in the process of installing a C++ compiler on this computer (see Install C++ compiler on old MS-DOS computer with floppies for more details).. 22 Disk/98-se if your CD is not bootable Or you can download this which is a bootable Windows 95 iso <https..> sys and you need to find a different one Just what you see on the screen:Example : DEVICE=CDROM\_DRV.. BAT Maybe not a long term solution, but that could help to determine where the stability issue exists.

### driver san francisco

If you still encounter problems, attach to the other IDE port if your motherboard has one, or look on your favorite auction site for an ISA IDE adapter and see if you have better luck with that.. The information mentioned in item 1 is shown here:In both cases, the DOS prompt never appears, and the system does not accept commands.. Many, if no most of them do Usually it can be disabled by a jumper on the sound card.. The drive is being powered correctly; it opens and closes as it should The driver is installed in D:CDROM, while the MS-DOS system files are located in the C: drive.. (Of course, MSCDEX EXE cannot access the device, as the driver is not loaded) This leads me to believe that I have the drive and its driver set up correctly.. mscdex won't work with the cdrom sys remed out but it won't affect anything I agree with the pause as the first line in the autoexec.

### driver parallel lines

Information about the driver is displayed 2 An unusually large cursor flashes on-screen.. Community♦KyleKyle 5 Answers I think the clue is in the description box Odds are, the sound card has an IDE port on it.. However, that does not help me considering that I am unable to do anything with the computer once the driver loads.. SYS driver, try changing it I don't know

---

just what DriverGuide offered you, but there are some drivers that tended to work on almost all drives, and use up far less conventional memory than most other CD drivers.. Does anybody know how I would be able to gain access to the MS-DOS prompt and use the computer while the driver is loaded?Thanks in advanced for your help.. Confix sys can also be useful, allowing you to echo messages and pause bootup during config.. SYS /D:MSCD001 [/DMA]/DMA --> Enable PCI Bus Master DMA Mode/UDMA --> Enable PCI Bus Master Ultra DMA Modeis almost telling you that the command line isn't right.. Your system dates from the era when there were often issues with slaving two devices on a single IDE port that weren't from the same manufacturer and didn't explicitly support it.. Dos Cd Rom Driver Download FreeGRUB4DOS can boot off DOS / LINUX, or via Windows boot manager / syslinux / lilo, or from MBR / CD.. [driverguide.com/driver/detail.php?driverid=349099](http://driverguide.com/driver/detail.php?driverid=349099)) and have followed the instructions in the manual (included in the driver download) to connect the drive to the system and install the software.. LawrenceCLawrenceC61 7k1212 gold badges109109 silver badges186186 bronze badgesI am going to go another direction.. Simply rem out the line in the config sys file that loads cdrom sys and reboot If you get a DOS prompt at that point then it is the cdrom.. sys is causing the problem ZiggyStardustZiggyStardustI agree with the comment about removing MSCDEX from AUTOEXEC.. I have a link for MS-DOS 6 22 with a CD-ROM driver The driver is 'cdrom img' Then the three other DOS install disks.. KneepuckKneepuckTry using the Oak CD-ROM driver here Make sure you add HIMEM SYS as it directs.. It also has builtin BIOS disk emulation, ATAPI CDRomdriver, etc GRUB4DOS can be easily run via command-line so you can take it for a test drive to.. You can add line in to Config sys to load device driver (sys files) REQUEST CD/DVD Drive Drivers For MS-Dos 6.. Currently the CD-ROM drive is hooked up as a slave drive to the HD, and the jumper is set accordingly. d70b09c2d4
